Keyboard Macro Creator is a simple yet powerful utility that lets you create customizable keyboard macros for Windows. Creating macros may be a time-consuming task and you might find it frustrating trying to create the macros yourself. That is why the program lets you easily create keyboard macros, which are shortcuts that execute predefined commands or perform specific tasks automatically. For example, if you are working on a video editing project and need to repeat a task many times, you can create a keyboard macro that automatically renames all the files and puts them into a new folder. Once you have created the macros, you can assign them to any shortcut keys you want. You can also create a simple dialog or a full-blown application for execution of the macro. Application toolbars provide you with many options for creating macros. There are more than 50 toolbars for working with macros in this application. There are even toolbars that create or edit macros. All toolbars can be added to a layout, so you can organize the toolbars as you want. The program also has a multi-language interface that supports up to 4 languages. There are 8 different languages available, including English, French, German, Spanish, Portuguese, Russian, Japanese, and Korean. Toolbar labels provide simple, descriptive information about the commands available on the toolbars. You can also search for a command in the Help file. Furthermore, some of the toolbars are configurable. You can change the size, position, or the number of toolbars. You can even change the layout of the toolbars. You can create your own toolbar layouts as well. The program comes with a demo version that allows you to try out all of its features. The number of languages included in this demo version is limited to English and French. When you need more languages, you need to purchase the full version. You can create and use custom toolbars as well. As you create custom toolbars, you need to first select a toolbar template. All the tools and commands that you can use in the full version are included in the toolbars template. Once you have created the toolbars, you can assign them to any shortcut keys you want. You can also create a dialog or an application for execution of the macro. The program is easy to use, because there are many tools for creating custom toolbars. KEYMACRO is a music notation software that allows users to easily create and customize their own personal sheet music and/or musical scores. It can be used to create and share your music in formats that your mobile devices can support such as WAV, M4A and M4P. It includes a special module that integrates with several popular music notation programs like FL, Sibelius, Rock Band, Notator, Notatik, etc. The import and export features of KEYMACRO are best suited for users who use different notation programs as they can easily save their custom scores to text formats like PDF and MIDI. Keymacro users can take advantage of standard music notation features such as automatic transpositions, musical scores, score analysis, print, printing, synchronization, audio-video combinations, MIDI to WAV, MIDI to PDF, music notation files, music playback and much more. It allows users to add musical notes, symbols, pitches, chords, beats, symbols and special symbols to their music score. Additionally, it also includes a tool to create a table of contents (TOC) for music notation files. Keymacro also includes a feature that allows users to change the default notation file format. This can be done in the Tools menu. Keymacro features: Includes a wide variety of music notation programs integration including FL, Sibelius, Notator, Notatik, etc Import MIDI notes, MIDI Chords, MIDI Instruments, MIDI Grooves, MIDI Patterns, MIDI Scenes, MIDI Arpeggios, MIDI Drum Licks, MIDI Transpositions, MIDI Arpeggio Patterns, MIDI Drum Licks, MIDI Tempo, MIDI Splits, MIDI Timing from any music notation program to KEYMACRO Import MIDI Drum Tracks and MIDI Drum Sequences from any music notation program to KEYMACRO Support most standard notation file formats such as WAV, M4A, M4P, etc Export to PDF, MIDI, M4A, MP3, WAV and any custom music notation file format Search and replace symbols Retrieve and display the symbol sequence that corresponds to any audio sample Use the selected sequence, or the entire table of symbols to write out music notation files and change the note/chord text, symbols, text blocks and spacing Display a chord by name, include chord in name, transpose the chord by a scale letter and more Display the names of the chords Select a pitch and transpose the
